

JARRED PROW

MACHINIST III | CNC PRECISION MACHINING

Sauk Rapids, MN | 320-339-2239 | [\[jarredprow@gmail.com\]](mailto:jarredprow@gmail.com)

PROFESSIONAL SUMMARY

Machinist III with 14+ years at Ichor Systems specializing in precision CNC production, machine setup, and process troubleshooting. Experienced with Mori Seiki and Haas equipment, horizontal and vertical mills, and SW multi-spindle machines. Strong hands-on capability in custom workholding, fixture and jaw fabrication, blueprint/GD&T interpretation, tooling, offsets, and tight-tolerance inspection. Known for practical problem solving, quality, and production efficiency.

PROFESSIONAL EXPERIENCE

ICHOR SYSTEMS - Sauk Rapids, MN *Machinist III | April 2012 - Present*

- Operate, set up, and troubleshoot Mori Seiki and Haas CNC machines, including horizontal mills, vertical mills, and SW multispindle equipment.
- Perform complete setups: workholding, tooling, tool offsets, work offsets, first-piece checks, and production adjustments.
- Design and manufacture in-house workholding, custom soft jaws, fixtures, and tooling; modify setups to improve access, repeatability, and efficiency.
- Read and interpret blueprints, engineering drawings, GD&T, and machining specifications; maintain tight dimensional tolerances.
- Select cutting tools/inserts and determine practical speeds, feeds, and machining strategies for production work.
- Inspect parts with micrometers, calipers, depth micrometers, indicators, and other precision equipment.
- Troubleshoot tool wear, chatter, dimensional variation, surface-finish issues, and other machining problems; make corrective adjustments.
- Perform milling, drilling, tapping, boring, reaming, threading, facing, contouring, pocketing, and related CNC operations.
- Collaborate with engineering and quality teams on process improvements, tooling life, cycle time, and production issues; assist and train other machinists as needed.

TECHNICAL SKILLS

Mori Seiki CNC

- Haas CNC
- Horizontal Mills
- Vertical Mills
- SW Multi-spindle Machines
- CNC Setup & Operation
- Custom Workholding
- Fixture Fabrication

Blueprint Reading & GD&T

- Precision Inspection
- Tool & Work Offsets
- Tooling & Insert Selection
- Speeds & Feeds
- CNC Troubleshooting
- Tight-Tolerance Machining
- Process Improvement

MACHINING & INSPECTION

operations: Milling, drilling, tapping, boring, reaming, threading, facing, counterboring, countersinking, contouring, pocketing, deburring.

Inspection: Micrometers, calipers, bore gauges, depth micrometers, dial indicators, height gauges, in-process and final inspection.

EDUCATION

Rocori High School - Cold Spring, MN | 1992 - 1996
